

# The Monarch Highway

The Monarch butterfly population has declined by 80% since 1997. This is due to a combination of factors including the loss of their milkweed host plants, the use of pesticides, and the loss of their overwintering habitat. To help save the monarch butterfly, we need to take action now. We can plant milkweed, create butterfly gardens, and protect their overwintering habitat. For more information, visit [www.monarchbutterfly.org](http://www.monarchbutterfly.org).
